NATIONAL SCIENCE DAY REPORT

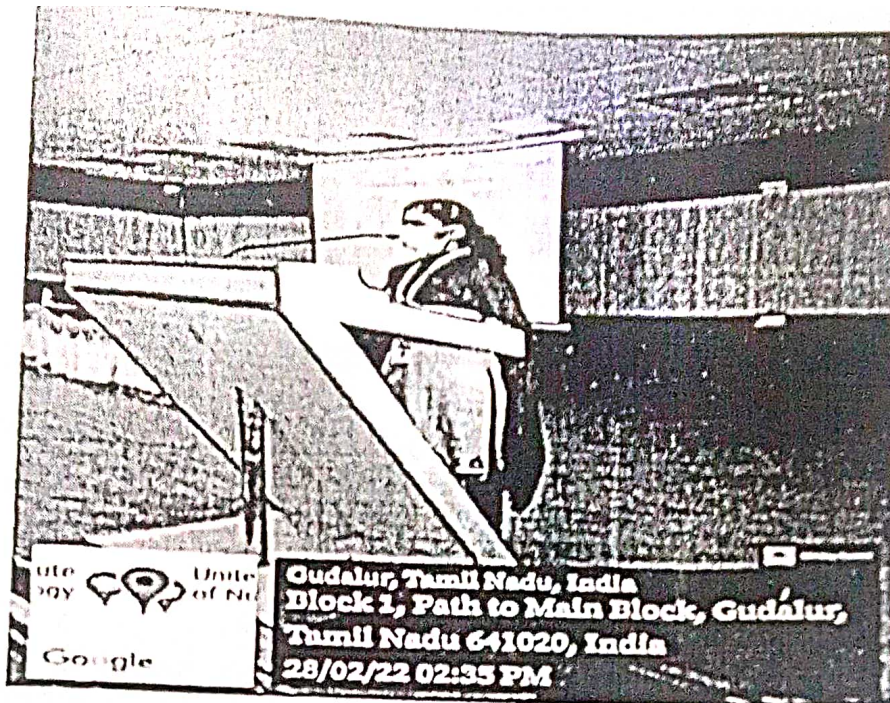

On February 28, 2022, the first-year students at United Institute of Technology observed National Science Day to commemorate Indian physicist Sir Krishna Raman's discovery of the Raman effect in 1928. The occasion was presided over by Dr. S. RamKumar, Principal - United Institute of Technology. Our first-year student Ms. Dharasini from the Artificial and Intelligence department gave the introductory speech.

Elocution, Powerpoint and Poster Presentations, Model display, Drawing competition based on the topic "Space Science in the Upcoming Era," and a Science Quiz were all part of the celebration. National Science Day is commemorated to promote a message about the value of science in people's everyday lives. It is also commemorated by debating all concerns and using new technology for scientific advancement. The theme for 2022 was "Integrated Approach in Science and Technology for a Sustainable Future," which received a lot of attention.

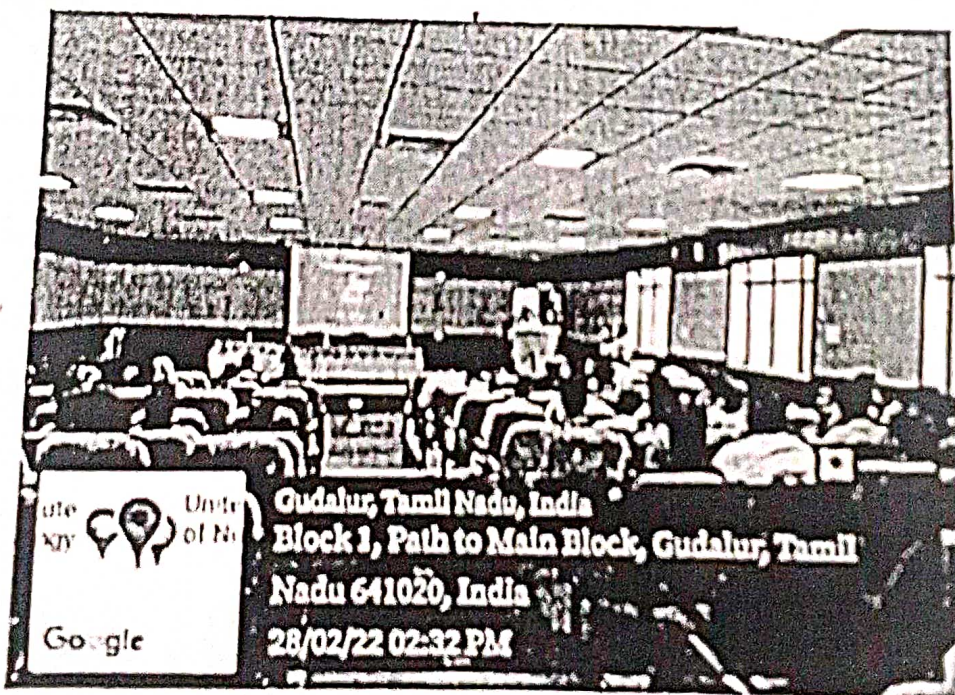

Our Principal presented the trophies for all three competitions to the students. The vote of thanks was proposed by Mr. Adithya of the Artificial and Intelligence Department.
